2 Introduction

This document provides information about supported software, firmware, and hardware versions for VxRail.

NOTE: This Firmware Support Matrix contains the latest compatibility and interoperability information. If you observe inconsistencies between this information and other VxRail documentation or references, this document supersedes all other documentation.

VxRail rules

This section contains consideration rules when using VxRail.

Table 1 VxRail rules

Information	Description
Minimum number of VxRail nodes in a cluster Exception: specific 2-node vSAN configurations with a witness Exception: For 4.0.x and 4.5.x releases below 4.5.150; the first four (4) nodes of any cluster must be homogeneous, and the configurations must match	3
Maximum number of VxRail nodes in a cluster: For releases before 4.0.400/4.5.101/4.7.000, any configuration greater than 32 nodes will require a request for product qualification (RPQ)	64
All nodes in a cluster must run the same version of VxRail software	✓
Hybrid and All-Flash nodes cannot be mixed in the same cluster	✓
Maximum of 8 nodes when only using a 1 GbE network	✓
10GbE and 1GbE networks cannot both be used for VSAN traffic	✓
10GbE and 25GbE networks cannot both be used for VSAN traffic	✓

8 FW Not Locked in Factory

VxRail does not lock (i) CPLD, (ii) Chassis Management, and (iii) IDSDM FWs in factory. When new FW is released for these components, they cut-in to manufacturing and appear in the subsequent shipment.

NA → Not valid for those VxRail Systems

* → only E665/F/N

CPLD SWBs per release:

E560/F/N – 1.0.1(FKRG7), 1.0.2(FN8CW), 1.0.6(9N4DH) (Current Factory)

P/V570/F – 1.0.1(GHRPC), 1.0.6(PC0N3), 1.0.7(VJT4F), 1.1.3 (5J9KP), 1.1.4 (G65GH) (Current Factory)

G560/F – 1.0.6 (G3PTK), 1.0.9 (7MJ7K), 1.0.9 (7MJ7K) 1.1.0 (XR7JW) (Current Factory)

P580N – 1.0.6 (67GJY) (Current Factory)

D560/F – 1.0.8 (MP278), 1.0.10 (1GW62) (Current Factory)

E665/F/N, P675F/N – 1.0.3 (YR1G7), 1.0.6 (N8V43), 1.0.7 (79XGF) (Current Factory)

Notes:

1. This table shows the versions of CPLD FW installed on VxRail systems when manufactured with the corresponding VxRail SW release.
2. Updating older CPLD FW installed on previously deployed VxRail systems is only required when specifically stated in the Release Notes.
3. Updating VxRail SW to a new release (LCM) does NOT automatically update CPLD FW. When required, CPLD FW must be updated manually.

8.2 Chassis Management Board – Valid Versions

	4.7.510		7/15/20						X (until 7/14/20)	X				

NA → 4.7.400 is not a valid release for the G560/F

G560/F – 1.53.00.00 (MF2H1), 1.67.00.00 (CCK6H), 1.70.00.00 (PF3RM), 2.1.9 (P6CGF) 2.37 (338FP) 2.40 (74TRH) 2.51 (5H2H5) (Current Factory)

Notes:

1. LCM is not supported for the Chassis Management Controller/Board.
2. The CM FW is not locked in the factory for VxRail. This means that when a new CM FW version is cut-in to manufacturing, it will appear on all subsequent G560/F systems shipped from manufacturing as of that time.
3. Any RTW only release is not relevant as there is no LCM. Manufacturing only deploys with the versions noted in the table. CM Board updates must be done manually to RTW releases.

8.3 IDSDM – Valid Versions

IDSDM FW is “not locked” in factory. When a new FW is released, it is available for manufacturing. LCM is supported for IDSDM FW.

IDSDM released versions - 1.7 (FF4WY), 1.9 (3N5TF), 1.13 (2NPVN) Current Factory

Notes:

1. IDSDM FW is not locked in the factory for VxRail. This means that when a new IDSDM FW version is released and available, it cuts-in to manufacturing and it will appear in subsequent shipment.
2. LCM is supported for IDSDM and FW can be updated with VxRail RTW only releases.
3. IDSDM is supported for E560/F/N, P570/F, V570/F, S570, P580N VxRail models.

10 Unmanaged Devices

This section lists PCIe cards that can be configured for VxRail platforms but are not managed by VxRail. The FW/Driver information shown here is based upon the current shipping FW/Driver as of a specific VxRail release. Be aware that since VxRail does not manage these devices, the FW/Driver information could change asynchronously to a VxRail SW release.

11 Supported Boot Devices

This section provides information about the supported boot devices.

Notes:

- Drive Firmware is “not locked” in factory. When new Firmware is introduced in factory for any drive, it can appear with new system shipments, drive adds, or drive replacements. A new VxRail release is not required for this new Firmware to appear in these new scenarios.
- The “Min Rev” column indicates that this Firmware version or higher is supported.

14 Supported switches

This section provides information about the supported switches by VxRail.

Switches must meet the following requirements for VxRail 4.7 and above:

- Support IPv4 unicast
- Support IPv6 multicast

Switches must meet the following requirements prior to VxRail 4.7:

- Support IPv4 multicast
- Support IPv6 multicast

In addition, the following switch features are recommended:

- Enable IGMP snooping and querier.
- Enable MLD snooping and querier

15 Getting help

15.1 Contact Dell Technologies

You can link your Online Support account with VxRail Manager and access support resources without having to log in separately.

NOTE: If you plan to set up Secure Remote Services (Secure Remote Services), you have to link your Online Support account to VxRail Manager under the same ID or it may not work properly.

15.2 Register for online support

You can create an Online Support account to access support resources such as:

- Register your VxRail.
- Obtain product license files and software updates.
- Download VxRail Series product documentation.
- Download the SolVe Desktop Procedure Generator.
- Browse the VxRail Series community and support information.
- Link your support account for access to resources from within VxRail Manager.

To register for online support:

1. Go to [Dell Technologies Support](#).
2. Click **Register** here.
3. Fill in the required information.

Support will send you a confirmation email, typically within 48 hours.

15.3 Access support resources

You can access support resources for your VxRail by one of the following:

- [VxRail Support](#)
- [Dell Technologies Support](#)
- <https://solve.dell.com/solve/home>

NOTE: Additional VxRail Series information is available through the SolVe desktop tool. SolVe includes step-by-step procedures for replacing certain hardware components, as well as other tasks.

A.1 Disk slot mapping – E460/F, P/V470/F, S470

VxRail is delivered from the factory with cache and capacity disks pre-populated in specific disk slots in the chassis. The slot location of the cache and capacity disks is important to the operation of VxRail and should not be altered unless directed by a Dell Technologies service professional.

For the drive slot mapping tables in this section, use the following legend:

C= Cache SSD

D= Capacity SSD or HDD

Appendix – Disk Group Configuration Rules – D560/F, E560/F/N, G560/F, P570/F, V570/F, S570, P580N

Rule: We do not support mixing SAS/SATA/NVMe SSD drives in the same disk group.

Rule: We do not support mixing capacity HDDs with capacity SSDs in the same disk group.

Rule: For initial installation, we require all capacity disks to be of the same size in the same disk group.

Rule: Different disk groups can have different cache drive sizes and types within a node or server.

Rule: Different disk groups can have different capacity drive sizes and type within a node or server.

Table 13 Disk Slot Placement Rules – 14th Generation

Appliance	Quantity of Cache SSD	Quantity of Capacity Devices
G560/G560F	1 (per node, max of 4 nodes)	1 to 5 (per node, max of 4 nodes)

Rule: For releases from 4.7.530 and later

- When replacing a drive in a disk group, a larger capacity drive can now be used.
- When expanding a disk group, larger capacity drives than currently exist in a disk group can be used.

C Appendix – Disk Group Configuration Rules – E665/F/N, P675F/N

Rule: We do not support mixing SAS/SATA/NVMe SSD drives in the same disk group.

Rule: We do not support mixing capacity HDDs with capacity SSDs in the same disk group

Rule: We require all capacity disks to be of the same size in the same disk group.

Rule: Different disk groups can have different cache drive sizes and types within a node/server

Rule: Different disk groups can have different capacity drive sizes and types within a node/server

Table 22 Disk Slot Placement Rules – E665, E665F, E665N, P675F, P675N

VxRail	Quantity of Cache SSD	Quantity of Capacity Devices
E665/E665F	1	1 to 3
	2	2 to 6
E665N	1	1 to 4
	2	2 to 8
P675F	1	1 to 5
	2	2 to 10
	3	3 to 15
	4	4 to 20
P675N	1	1 to 5
	2	2 to 10
	3	3 to 15
	4	4 to 20

Rule: For releases from 4.7.530 and later

- When replacing a drive in a disk group, a larger capacity drive can now be used.
- When expanding a disk group, larger capacity drives than currently exist in a disk group can be used.

C.1 Disk Slot Mapping – E665, E665F, E665N, P675F, P675N

VxRail models are delivered from the factory with cache and capacity disks pre-populated in specific disk slots in the chassis. The slot location of the cache and capacity disks is important to the operation of your VxRail and should not be altered unless directed by a Dell Technologies service professional.

For the drive slot mapping tables in this section, use the following legend:

- C= Cache SSD
- CN = Cache NVMe
- D= Capacity SSD or HDD
- DN= Capacity NVMe
